5 EASY STEPS
TO COLLECTING

Follow this to easily navigate the collection or "pick-up" process after issuance and learn how to export the certificate from your browser.

1 Comodo Sends an Email

After completing validation, Comodo will release the certificate from their system and send a collection link to the applicants email address.

Download Certificate via Browser 2

Using the same browser (Firefox) and PC which generated the order, follow the collection link in the email sent by Comodo and initiate the downloading process.

3 Pull Private Key and Install

Using the JavaScript provided by Comodo, the code signing certificate will automatically pull the previously stored private key from the browsers file system and install in your Certificate Manager folder.

To receive the actual certificate, you must export the code signing certificate and private key from the Firefox browser and save it to your PC/desktop as a PFX (.p12) file. Follow the detailed instructions below to navigate through the export process in Firefox, the most popular browser for Code Signing products:
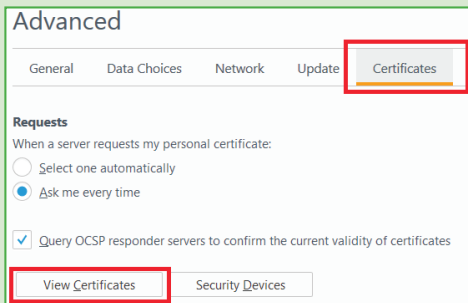

1 Open Firefox (Recommended)

2 Navigate to **Open Menu** then click **Options or Tools**
**4** Navigate to the **Certificates or Encryption** tab and select **View Certificates**

3 Select the **Advanced** tab

5 Click **Your Certificates** tab and select your **Certificate Name**

6 Click **Backup All**... and select **OK**

8 Enter your Certificate backup password and click **OK**

Choose a Certificate Backup Password ✕

The certificate backup password you set here protects the backup file that you are about to create. You must set this password to proceed with the backup.

Certificate backup password: ●●●●●●●●●●●●●●●●●

Certificate backup password (again): ●●●●●●●●●●●●●●●●●

Important: If you forget your certificate backup password, you will not be able to restore this backup later. Please record it in a safe location.

Password quality meter

OK   Cancel

7 Enter a friendly name and **Save As** a PKCS12 (.p12 or .pfx) file

File name: Comodo Code Signing Certificate
Save as type: PKCS12 Files

Hide Folders

9 Click **OK** and you've successfully backed up your certificate and private key(s).

Alert ✕

⚠ Successfully backed up your security certificate(s) and private key(s).

OK

5 Sign Your Code/Application

Once the code signing certificate and private key are bundled together in a PFX (.p12) file, you can finally proceed with signing your application using the appropriate signing tools (i.e. Java Keystore, Adobe Air) or send it to your developer(s) for completion.
